## Box No. II Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.:  
because they relate to subject matter not required to be searched by this Authority, namely:
  
2. ☐ Claims Nos.:  
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:
  
3. ☐ Claims Nos.:  
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

## Box No. III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

(See extra sheet)

1. ☐ As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
  
4. ☒ No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.: 1 - 9

### Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest.
- ☐ No protest accompanied the payment of additional search fees.

Continuation of Box No.III of continuation of first sheet (2)

The inventions of claims 1-9 have a common matter substantially relating to "a data transmission method/system for transmitting data to a device having an external connection unit, wherein the device detects that a storage medium containing unique identification data and communication start data starting a communication processing of the device is connected to the external connection unit and upon detection of that the storage medium is connected, it reads out the communication start data and the identification data from the storage medium, and transmits the identification data to the data transmission device according to the communication start data read out while the data transmission device transmits data corresponding to the received identification data to the device." The inventions of claims 10-11 have a common matter relating to "a data structure having operation data for operating an operable toy in a scene of content data relating to a comic, animation, game, or movie where a character shows up". Each of the common matters has a special technical feature.

Accordingly, there exists no matter common to all the claims.

Since there exists no other common feature which can be considered as a special technical feature within the meaning of PCT Rule 13.2, second sentence, no technical relationship within the meaning of PCT Rule 13 between the different inventions can be seen. It is obvious that the inventions of claims 1-11 do not satisfy the requirement of unity of invention.

It should be noted that the claims of this international application are divided into two groups of inventions: a group of inventions of claims 1-9 and a group of inventions of claims 10-11.
